PROJECTS

See full list of projects on github.com/RishikeshPolasa

Facebook Clone App

- The Facebook clone app is a social media app. The app is developed by using Reactjs. The main idea behind developing this app is used to interact with the people around the world by posting individuals feeling's as post. To look the app more creative, there is feature called like. The user's can like their friends post's.

Weather-App

- The Search results of the App give's the weather details of all city's around the world.The App uses openweather API.Here App uses Google Authentication using firebase. To remove the eyestrain,App has darkmode too.

Job Listings With Filtering

- The project shows all job listings in different roles,to hassle free added a new feature called filter.The filter allows you to display what role of a job you want.
